

# How to Fit

## a Roman Blind (RECESS FIT)

You will need a screwdriver, a drill, a tape measure and a pencil.

### Step 1 - BRACKET POSITIONS

Measure 50mm from the window and mark this point — this is where your first bracket will be placed. Space any other bracket evenly along the length of the blinds.

### Step 3- PREPARE

Loosen the Velcro on the blind to allow easier access to the brackets during installation.

### Step 5- ADJUST

Reattach and smooth the Velcro on the blind for a neat finish. Check the blind is level. If needed, adjust using the toggles located on the back of the blind for perfect alignment.

### Step 2 - FIX BRACKETS

Using a drill and suitable fixings for your wall type, secure each bracket in place at the marked points.

### Step 4 - ATTACH THE BLIND

On each bracket, open the catch by sliding the clip to the right. Slot the headrail of the blind onto the front of each bracket. Finally, secure the blind by pushing the clip back to the left, locking the blind in place.

# Roman care instructions

---

All made-to-measure Roman blinds should be professionally dry cleaned to preserve their quality, texture, and colour. Each blind includes a care label attached to the lining for easy reference. To keep your blinds looking fresh between cleans, use a vacuum cleaner with an upholstery brush attachment to gently remove dust and maintain a crisp appearance.

Roman blinds require minimal dressing After installation, simply lower the blind fully and use a handheld steamer to delicately remove any creases, working from top to bottom. Take care not to over-steam or let the fabric become damp. Avoid touching the face fabric directly to prevent marks or water spots.

Once steamed, allow the blind to hang freely for several hours so the folds can settle naturally. This gentle process helps your Roman blind achieve its smooth, tailored look and ensures it hangs beautifully in your window.
